Summary

"Sky is limitless".

"The more you know the less you understand".

Just keep it balance.

Hi, there. How can I help you?

Experience

Senior Frontend Engineer

Indodana

Mar 2020 - Present (1 year +)

- Initiating setup and develop Isomorphic React, go check it out indodana.id/kredit/hp
- Initiating setup and develop Dynamic Registration Form and Dashboard for our Whitelabel partners
- Contributing in setup OpenResty & Kubernetes Configuration
- Interviewing Candidate
- Code Reviewing
- Enhancing deployment script (Shippable) to support mono repo projects
- Adding and setup Sentry for logging front-end error
- Helping the Engineering Manager in technical decision
- Helping Product Manager to breakdown a task
- Collaborating with QA Team to decide task/bug priority
- Updating Whitelabel partners Client-Side Rendering Website to Isomorphic Website

Frontend Engineer

Indodana

Feb 2019 - Mar 2020 (1 year 2 months)

- Initiating, developing, and maintaining payment page
- Initiating and developing a dashboard for our merchant
- Maintaining and enhancing the internal dashboard
- Interviewing Candidate
- Code Reviewing
- Updating Webpack from v3 to v4, including creating chunk file, preload, prefetch
- Creating a proper structure for Webpack config (there are base, dev, prod config)
- Updating Project to use react-loadable
- Updating Several Projects from React 16.3.0 to 16.9.0 to support React hooks
- Collaborating with the marketing and SEO team to set Google Tag Manager and Meta tag

- All of the pages are creating using React, all the setups are done manually to ensure we understand each of the configurations
- Also contribute to backend development (mostly in API Layer, developed using ExpressJS)

Frontend Engineer

Wirecard

Oct 2017 - Jan 2019 (1 year 4 months)

Mainly I combine the business idea and application design into a working application that fulfils the business requirement with an excellent user experience. Four projects have been handled by me and teams, there are:

- Mayora Mobile Banking (Indonesia)
- CIMB RTB Mobile Banking (Malaysia, Thailand, Khamboja, Singapore, & Indonesia)
- Branch Delivery System (a banking solution system that will be a problem solving for a lot of banking out there)
- UI Configurator (a web-based application that will support the bank's back-office, basically user just need to config what kind of fields, table, or anything to be displayed and filled by the back-office officer in order to fulfill a certain task/menu).

Hybrid Programming (Cordova), React Native, and ReactJS are stack technologies that are being used while developing those applications. Besides, I also had a chance to develop an application on Smart Financial Terminal called Centerm E10 & M10.

Junior Programmer

Apr 2016 - May 2017 (1 year 2 months)

Developing Responsive Company Profile and Content Management System based on PHP (CodeIgniter).

Developing several Hybrid Applications using Cordova Phonegap (encapsulate HTML + CSS + JS through SDK)
